IDENTIFIERS	Population

ABSTRACT

The total population of the United States including the Armed Forces overseas was 241,596,000 on July 1, 1986. The median age of the population rose from 30.0 years on April 1, 1980, to 31.8 years on July 1, 1986, while the fastest growing segments of the population between 1980 and 1986 were the groups aged 35 to 44 years and 85 years and over. There were 2.3 million fewer children of school age and 2.3 million fewer young adults as the age groups which declined in growth were 5 to 13, 14 to 17, and 18 to 24. Estimates of the population from 1980 to 1986 are based on the 1980 census count, on an evaluation of the census count by demographic analysis, and on estimates of the components of population change from April 1, 1980 to July 1, 1986. The reported number of births and deaths was provided by the National Center for Health Statistics, U.S. Public Health Service. Data on members of the Armed Forces were obtained from the Department of Defense and from each branch of the military service. Estimates of net civilian immigration were derived by combining estimates for six separate categories. Tables showing the age structure of the population and the median age of the population are included. Charts illustrating the distribution of the total population, number of births by year and percent distribution of the white and black populations by age and sex are included. Detailed tables of total population, resident population,and civilian population from 1980 to 1986 are included in the report. (SM)

Estimates of the Population of the United States, by Age, Sex, and Race: 1980 to 1986

INTRODUCTION

This report presents estimates of the population of the United States by single years of age, sex, and race for each year from July 1, 1980, to July 1, 1986; comparable census figures are also shown for April 1, 1980. Estimates are shown for the total population including Armed Forces overseas, the resident population, and the civilian population. The estimates shown here for 1984 and 1985 supersede the comparable figures contained in Current Population Reports, Series P-25, No. 985. Intercensal estimates for the 1970's can be found in Current Population Reports, Series P-25, No. 917.

Hispanic population estimates by age and sex have been produced and will be published in a forthcoming Current Population Reports, Series P-23. After that initial publication in Series P-23, the estimates will be incorporated into future versions of this report.

HIGHLIGHTS

- The total population including Armed Forces overseas was 241,596,000 on July 1, 1986, up 6.4 percent from the 227,061,000 on April 1, 1980.

- The other-races population grew at a much more rapid rate (45.0 percent) between 1980 and 1986 than either the Black population (9.8 percent) or the White population (4.9 percent).

- The median age of the population rose from 30.0 years on April 1, 1980, to 31.8 years on July 1, 1986.

- The fastest growing segments of the population between 1980 and 1986 were the groups aged 35 to 44 years (29.0 percent growth) and 85 years and over (24.8 percent growth).

- The population aged 14 to 17 years declined by 8.9 percent between 1980 and 1986, faster than any other age group. The groups 5 to 13 and 18 to 24 also declined.

- There were 2.3 million fewer children of school age in 1986 than there were in 1980 and 2.3 million fewer young adults.

TRENDS IN POPULATION GROWTH

The total population including Armed Forces overseas was 241,596,000 on July 1, 1986, an increase of 14.5 million (6.4 percent) over the population on April 1, 1980 (table A). Between July 1, 1985, and July 1, 1986, the population grew by 2.3 million, or 1.0 percent. The gain was the result of a natural increase (births minus deaths) of 1.6 million and net civilian immigration of 674,000. Natural increase was 1.7 million for the year ending June 30, 1985, while net civilian immigration was 613,000.

As in past years, the Black population grew faster than the total population. Between April 1, 1980, and July 1, 1986, Blacks grew by 9.8 percent, while in the year ending June 30, 1986, they increased by 1.5 percent. The other-races[1] population, however, had a far higher growth rate for the period (45.0 percent) than both the White (4.9 percent) and the Black (9.8 percent) populations. For the year ending June 30, 1986, the other-races population grew by 5.2 percent. While Black growth has been overwhelmingly due to natural increase (excess of births over deaths), other-races growth has resulted from relatively high net civilian immigration. Two-thirds of the other-races growth between April 1, 1980, and July 1, 1986, was from net civilian immigration, compared with only 15 percent for the Black population.

CHANGES IN AGE STRUCTURE

The age structure of the U.S. population mirrors the birth history of the country (figure 2). This is not to say that deaths and net civilian immigration have no effect on the age structure. They do play a role. Past births, however, are the single most important determinant of the age structure.

The under-5 population grew from 16.3 million to 18.1 million, or by 10.9 percent, between 1980 and 1986. (See table A.) There are now more preschool-aged children than there have been since July 1, 1967, when there were 18.6 million. This fact foreshadows larger cohorts of children entering school in the near future. Many of these children are part of the echo effect from the baby boom. That is, they are the offspring of the baby boom generation.

The population 5 to 13 years old dropped by 2.6 percent between 1980 and 1986, from 31.2 million to 30.3 million. However, this young school-age population increased by 237,000, or 7.9 percent between July 1, 1985, and July 1, 1986. (See figure 3.) This increase marks the turnaround of a long period of decline in the number of 5-to-13-year-olds. Until 1986, their number had dropped every year since July 1, 1969, when there were 36.8 million 5-to-13-year-olds. Now, for the short-term future at least, the number of 5-to-13-year-olds should continue to grow.

---

[1] "Other races" is a category consisting principally of American Indians, Alaskan Natives, Asians, and Pacific Islanders.

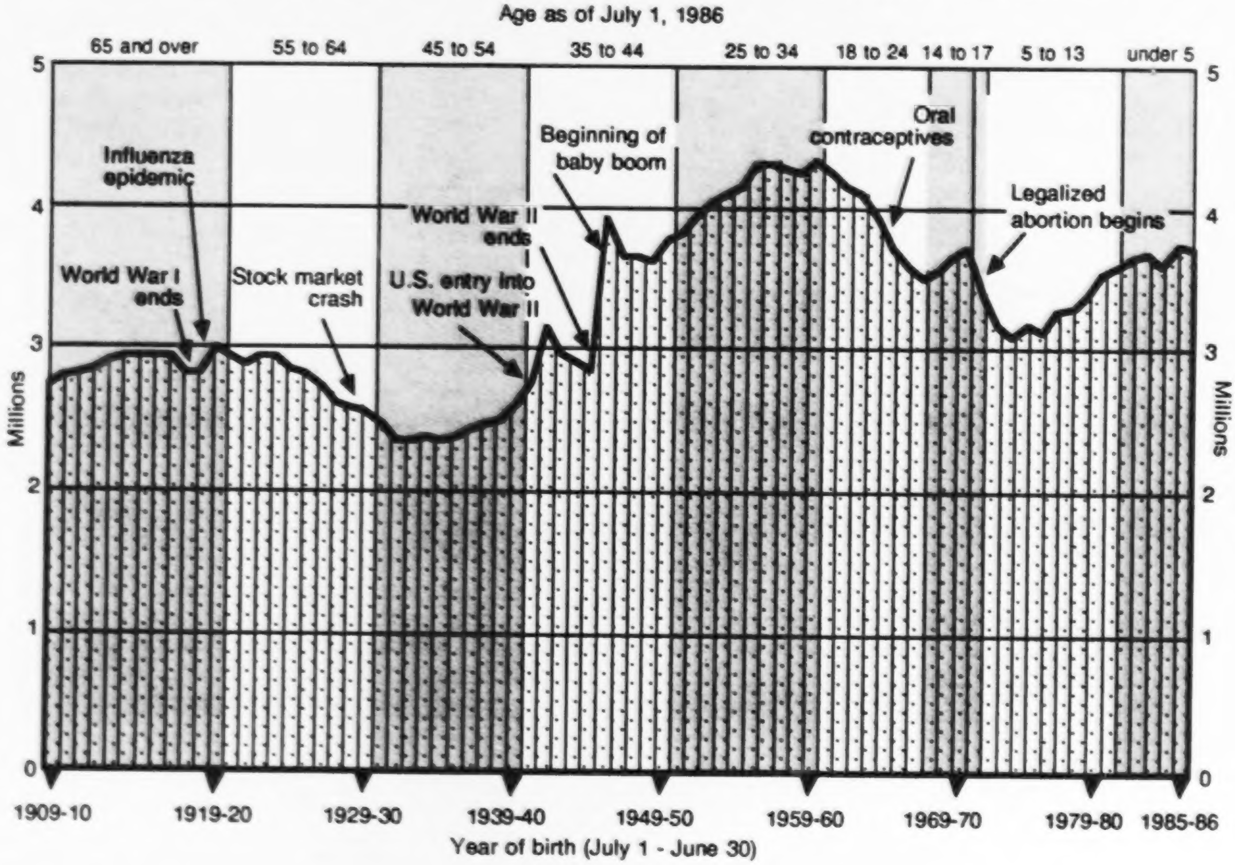
Figure 2.

Number of Births, by Year, 1910 to 1986, and Relationship to 1986 Age Groups



Both the teenage and the young adult populations declined in size between 1980 and 1986. The number of 14-to-17-year-olds dropped by 8.9 percent between 1980 and 1986, from 16.2 million to 14.8 million. At the same time, the population 18 to 24 years old declined from 30.3 million to 28.0 million, or by 7.6 percent. Both of these age groups will continue to shrink in size in the near future.

The population aged 25 to 44 experienced significant growth between 1980 and 1986. This was to be expected as the leading edge of the baby boom reached age 39 in 1986. (See figure 2.) The 25-to-34 age group grew by 15.4 percent, from 37.3 million to 43.0 million. The 35-to-44 group grew faster than any other age group (29.0 percent) between 1980 and 1986; they numbered 25.7 million in 1980 and 33.1 million in 1986.

The number of 45-to-54-year-olds was 22.8 million in both 1980 and 1986, growing only 16,000 (0.1 percent) over the period, while the 55-to-64-year-olds grew by 2.4 percent, from 21.7 million to 22.2 million.

The 65-and-over population grew substantially between 1980 and 1986, and will continue to grow in the foreseeable future. There were 11.2 percent more 65-to-74-year-olds in 1986 than in 1980 (17.3 million versus 15.6 million), 17.1 percent more 75-to-84-year-olds (9.1 million versus 7.7 million), and 24.8 percent more persons 85 years and over (2.8 million versus 2.2 million).

That the American population is continuing to age is further documented by examining the median age over time (table B). The median age was 31.8 years on July 1, 1986, up 1.8 years from the median of 30.0 years on July 1, 1980. This increase has been at about 0.3 years each year since 1980, and the median age has increased each year since 1971, when it was 27.9 years. This aging trend is expected to continue as the early baby boom generations head toward middle age.

The Black population is considerably younger than the White population. This is clearly illustrated in figure 4, where the Black population pyramid for July 1, 1986, is superimposed over the White population pyramid for the same date.

The younger age structure of the Black population is also reflected in its median age. On July 1, 1986, the Black median age was 26.9 years, while the White median age was 32.7 years (or 5.8 years higher). This difference has remained fairly constant since the 1970's. Both the White and Black median ages have been rising for a number of years, with nearly equal absolute increases each year. Thus, both races exhibit the general aging trend present in the United States today.

COVERAGE OF POPULATION

Estimates of the population of the United States by single years of age, sex, and race are shown for April 1, 1980, to July 1, 1986, for the total population including Armed Forces overseas, the resident population, and the civilian population. They are consistent with the census-level population enumerated in 1980. The April 1, 1980, census count used (with modifications described below) is published in 1980 Census of Population, Vol. 1, *Characteristics of the Population,* Chapters A and B.

The *resident population* conforms to the concept of the U.S. population as shown in most of the decennial census reports. It includes residents of the 50 States and the District of Columbia, but excludes residents of the Commonwealth of Puerto Rico, residents of the outlying areas under United States sovereignty or jurisdiction (principally American Samoa, Guam, Virgin Islands of the United States, and Commonwealth of the Northern Mariana Islands), and other American citizens (military and civilian) living overseas. The *total population including Armed Forces overseas* includes the resident population of the United States plus the Armed Forces stationed in foreign countries, Puerto Rico, and the outlying areas. The *civilian population* represents the resident population less the Armed Forces stationed in the United States.

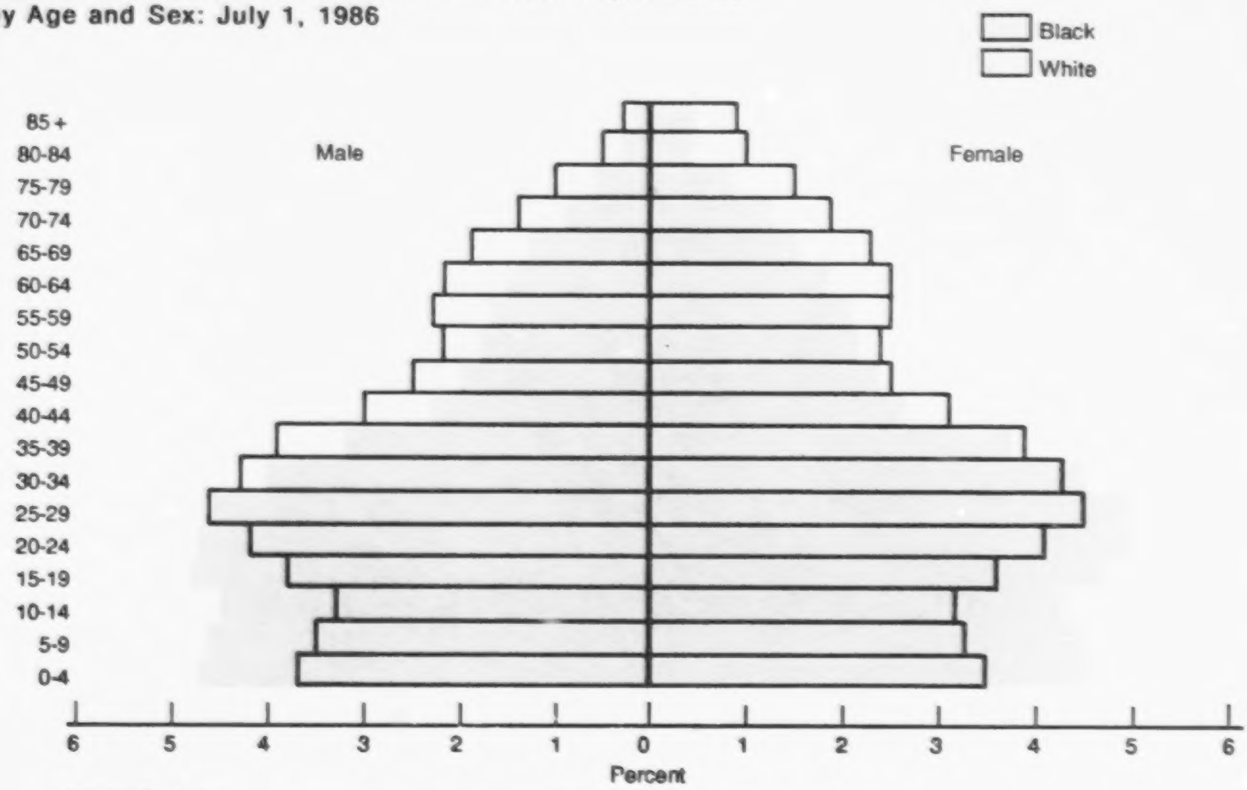
SOURCES AND METHODOLOGY

The estimates in this report are based on the 1980 census count, on an evaluation of the census count by demographic analysis, and on estimates of the components of population change from April 1, 1980, to July 1, 1986. The reported numbers of births and deaths were provided by the National Center for Health Statistics, U.S. Public Health Service. Data on members of the Armed Forces were obtained from the Department of Defense and from each branch of the military service. Estimates of net civilian immigration were derived by combining estimates for six separate categories: (1) alien immigrants admitted for permanent residence; (2) net arrivals of civilian citizens, based on data on the number of civilian Federal employees overseas, their dependents, and dependents of the Armed Forces overseas provided by the Office of Personnel Management and the Department of Defense; (3) net arrivals from Puerto Rico from information on passenger travel between the United States and Puerto Rico; (4) emigration from the United States by legal residents; (5) refugees; and (6) net undocumented immigration.

Estimates of the three types of populations for 1984 and 1985 have been revised since they appeared in Series P-25, No. 985. Revisions were necessary because: (1) the National Center for Health Statistics released final 1984 births and

Figure 4.

Percent Distribution of the White and Black Populations, by Age and Sex: July 1, 1986



Source: Table 1.

deaths; and (2) the Immigration and Naturalization Service released final data on alien immigrants for the year ending September 30, 1985.

Inflation-deflation method. The estimates in this report were prepared using the "inflation-deflation" method, which is a variant of the cohort-component method that takes account of estimated net census undercount by age, sex, and race. The inflation-deflation method is preferable to the cohort-component method because it preserves the actual pattern of population change by *age* rather than by *cohort* (a group of people born during the same time period). The vast majority of users of age estimates are interested in change over time in the population in specific ages or age groups and not in change over time in cohorts.

In the inflation-deflation method, the April 1, 1980, census population base including Armed Forces overseas is "inflated" to adjust for estimated net census undercount by age, sex, and race, and the resulting population estimates are carried forward by cohort to July 1 of each subsequent year by adding births, subtracting deaths, and adding net migration (table A-1). The July 1 estimates are then "deflated" to reflect estimated percent net census undercount using the same age-sex-race specific undercount rates. Finally, if necessary, an extremely small pro rata adjustment is made to the deflated estimates in each sex-race group to bring them into exact agreement with an independent estimate of the total population in each sex-race group obtained by carrying forward the census population with information on subsequent births, deaths, and net immigration without regard to age.

The application of the cohort-component method alone to census level figures results in considerable distortion when adjacent age groups (e.g., 15 to 19 and 20 to 24) have estimated percent undercounts that differ greatly. If net census undercounts were uniform by age, the two methods would yield similar results except for the population based on survivors of births during the estimation period.[2] Because of the uncertainty regarding the magnitude of the 1980 census undercount, use of the inflation-deflation method should not be considered an adjustment for the undercount. Rather, it is a method of producing an age distribution which is consistent with the census counts in a particular manner (i.e., by age, not by cohort).

Although the precise amount of undercount in the 1980 census is not known, the inflation-deflation method, even based on approximate undercount rates, still provides superior results to the conventional cohort-component method for most users. Simulations using a range of undercount estimates have shown that inflation-deflation population estimates are relatively insensitive to assumptions regarding the *level* of the undercount but are naturally sensitive to assumptions regarding the *age distribution* of the undercount. The relative insensitivity to level occurs because the assumed undercount is first added to the initial (i.e., census) population and then subtracted from the final (i.e., estimate date) population. The sensitivity of the inflation-deflation results to age patterns of undercount should not be a matter of great concern because some of the most robust results from the demographic studies of the undercount are the relative undercounts by age as shown by analysis of expected sex ratios.

---

[2] In the inflation-deflation method, births corrected for underregistration are carried forward to the estimate date and then deflated; in the cohort-component method, registered births are carried forward but are not deflated.

The inflation-deflation factors (table A-2) used in this report were derived from estimates of net census undercount developed by the method of demographic analysis. In this method, estimates of the population in various categories (e.g., age, sex, race) of the census data are developed by the combination and manipulation of various types of demographic data; these estimates are then compared to the corresponding census counts to yield estimates of net census undercount. A more detailed description of the methods used can be found in other Bureau reports and papers.[3]

Population estimates for July 1, 1980, to 1986. The estimates of the total population including Armed Forces overseas by age, sex, and race for July 1, 1980, to July 1, 1986, shown in table 1, were computed by carrying forward the April 1, 1980, population adjusted for net census undercount to each subsequent July 1 and then deflating the adjusted estimates to be consistent with the 1980 census base. The deflation of the adjusted estimates to census level was done with "deflation factors" by sex, race, and single years of age (table A-2). A deflation factor is defined as the ratio of the April 1, 1980 census count to the population adjusted for net census undercount. The deflation factors for each age were multiplied by the July 1 population estimates adjusted for net census undercount to produce census-consistent estimates for each July 1. The final step in the estimating procedure consisted of a small pro rata adjustment by sex and race so that the sum of the age groups agreed with the independent population totals. These totals are based on census counts and estimates of subsequent births, deaths, and net immigration.

Estimates of the resident population for July 1, 1980, to 1986, shown in table 2, were derived by subtracting the estimated number of Armed Forces stationed overseas from the total population including Armed Forces overseas. Estimates of the civilian population for the same period, shown in table 3, were derived by subtracting the estimated number of military personnel stationed inside the United States from the estimates of the resident population.

Births and deaths. The population estimates shown here are based on tabulations of vital statistics for the resident population made by the National Center for Health Statistics, U.S. Public Health Service. Final data were used for births and deaths through 1984. Provisional data were used for 1985 and 1986. The provisional estimates of births for races other than White were distributed to Black and to other races using final 1984 data. A 10-percent sample of death certificates from NCHS was used to distribute provisional estimates of resident deaths by race and sex to broad age groups up to 70 years and over. The deaths to the population 70 years and over for April 1, 1980, to June 30, 1980, were distributed to ages above 70 years based on the 1980 Medicare deaths distribution. The 1981 through 1983 Medicare deaths distributions for persons 70 years and over were used to distribute deaths for the years ending June 30, 1981, through 1983, respectively, while the provisional 1984 Medicare deaths distribution was used for the years ending June 30, 1984 through 1986. The Medicare data, which show calendar-year age, were converted to age at last birthday. Data provided by the Department of Defense and the Coast Guard have been used to estimate deaths of military personnel.

Net civilian immigration. Estimates of net civilian immigration to the United States for April 1980 through June 1986 were derived by combining estimates for six separate categories: (1) alien immigration, (2) net arrivals of civilian citizens, (3) net arrivals from Puerto Rico, (4) emigration of legal residents from the United States, (5) refugees, and (6) net undocumented immigration. Because complete data by age, sex, and race are not available for any of the categories of net civilian immigration, a variety of methods were used to estimate these characteristics.

1. *Alien immigration.* The annual report of the Immigration and Naturalization Service provides figures by age and sex for aliens admitted for permanent residence in the United States. Estimates of the race of alien immigrants for April 1, 1980, to June 30, 1985, were based on the reported country of birth of alien immigrants admitted and 1980 census data by race on the foreign-born population who entered the United States during the 1975-80 period. Alien immigrants were estimated for the year ending June 30, 1986, based on preliminary information received from the Immigration and Naturalization Service. They were distributed by age, sex, and race based on the final data for year ending June 30, 1985.

Indochinese, Cuban, and Haitian aliens who entered the United States on a conditional basis and later adjusted to permanent resident status were added to the population estimates in the year of entry rather than the year that they appeared in official immigration statistics.

[3] Current Population Reports, Series P-23, No. 115, *Coverage of the National Population in the 1980 Census, by Age, Sex, and Race: Preliminary Estimates by Demographic Analysis*, by J.S. Passel, J.S. Siegel, and J.G. Robinson, February 1982; and J.S. Passel, C.D. Cowan, and K.M. Wolter, "Coverage of the 1980 Census," unpublished paper presented at the annual meeting of the Population Association of America, Pittsburgh, Pennsylvania, April 18, 1983. A detailed statement of the methods used in the provisional (and final) estimates of the undercount, as well as a summary of the provisional estimates is presented in J.S. Passel and J.G. Robinson, "Revised Estimates of the Coverage of the Population in the 1980 Census Based on Demographic Analysis: A Report on Work in Progress," unpublished paper presented at the annual meetings of the American Statistical Association, Philadelphia, Pennsylvania, August 13-16, 1984. A report describing the Census Bureau's research on evaluating the accuracy of the population counts from the 1980 census is being prepared. The report will describe all phases of the methodology employed and present results of the research.

2. *Emigration from the United States.* No direct information about emigration of aliens or citizens is available for the period covered by this report. The Immigration and Naturalization Service (INS) stopped collecting data on alien emigration in 1957, and permanent departures of citizens are not recorded. The annual level of emigration for 1980 to 1986 is estimated to be 160,000. This figure is the result of Census Bureau research which has shown that estimates of foreign-born emigration used for the 1960's and 1970's were understated. Analysis of the foreign-born population counted in the 1960 and 1970 census and immigration data for the 1960-70 period yielded an estimate of foreign-born emigration of 1.1 million persons.[4] Additional research using a different source of data, the number of aliens registering annually with the INS, produced a similar estimate of emigration, 1.3 million foreign-born emigrants for the 1970-80 period.[5] Based on these estimates that foreign-born emigration occurred at fairly high levels for twenty years, total emigration since 1980 (including both native and foreign-born) is estimated at 160,000 annually. Such high levels of emigration, running about 30 percent of immigration, are entirely consistent with the historical experience in the United States. Data collected by the INS for 1908 through 1957 show emigration trends following immigration trends at approximately this same level.

The age and sex distribution for all emigrants is based on the analysis of 1960 and 1970 census data, which was done by age and sex. The race of emigrants was based on 1970 census data on the race distribution of 1965-70 immigrants from 52 countries.[6] Age-sex-race-specific rates of emigration from the 1960-70 study were applied to 1970-80 data to determine the distribution of emigrants in the most recent decade. The same distribution is assumed to apply in the 1980's.

3. *Net undocumented immigration.* Analysis of 1980 census data in conjunction with INS data on legal immigration and registered aliens indicates that about 2.1 million undocumented aliens residing in the United States were counted in the 1980 census.[7] Of the 2.1 million undocumented aliens counted, about 940,000 entered the United States during the period 1975 to 1980. A supplement to the April 1983 Current Population Survey was used to update the census estimates of undocumented immigration.[8] Although subject to some limitations, this study found an annual net increase of 100,000 to 300,000 in the undocumented alien population for 1980 to 1983. On the basis of these two studies, an estimate of 200,000 net undocumented immigrants for each year since 1980 has been used for the population estimates shown in this report. The age and sex distribution of undocumented immigrants is based on characteristics of the estimated 940,000 undocumented immigrants included in the 1980 census who entered the United States during 1975-80. The race distribution is based on the distribution by country of the same undocumented immigrants in the 1980 census and census data on the racial distribution of the foreign-born population by country.

4. *Net arrivals of civilian citizens.* The category of net arrival of civilian citizens is estimated on the basis of the change in the number of civilian Federal employees overseas, their dependents, and dependents of the Armed Forces overseas as reported by the Department of Defense and the Office of Personnel Management. A change in the size of the overseas population, minus its births, is assumed to indicate net movement to or from the United States. The net movement of civilian citizens overseas not affiliated with the Federal Government is not taken into account. Data from the Office of Personnel Management were used to distribute the estimates by age, sex, and race.

5. *Net arrivals from Puerto Rico.* Estimates of the net movement of persons between Puerto Rico and the United States mainland were based on the movement of passengers as reported by the Puerto Rico Planning Board. The age and sex distribution of these travelers was based on the differences between the age-sex distribution of migrants from Puerto Rico to the United States and the age-sex distribution of migrants to Puerto Rico from the United States between 1975 and 1980, as reported in the 1980 census.

6. *Refugees.* Since April 1980, the numbers of Indochinese refugees and Cuban and Haitian entrants entering the country have been as follows:

Period	Indochinese refugees	Cuban entrants	Haitian entrants
April-June 1980	42,000	104,000	2,000
July 1980-June 1981 . .	128,000	22,000	13,000
July 1981-June 1982 . .	103,000	–	3,000
July 1982-June 1983 . .	38,000	–	–
July 1983-June 1984 . .	51,000	–	–
July 1984-June 1985 . .	51,000	–	–
July 1985-June 1986 . .	46,000	–	–

These data were provided by the Office of Refugee Resettlement of the Department of Health and Human Services.

Modifications to the 1980 census. Two modifications to the 1980 census results were made. First, because of differences in the reporting of race between the census and other sources of administrative data (such as births and deaths), the 1980 census counts were modified to be consistent with the Office of Management and Budget categories. The modification resulted in the addition of 6.3 million persons to the White category and 188,000 persons to the Black population. All persons added to these two groups had reported themselves to be of "other" races; the majority of them identified themselves as being of Spanish origin.[a]

[8] Jeffrey S. Passel and Karen A. Woodrow, "Change in the Undocumented Alien Population in the United States, 1979-1983," revised version of a paper presented at the 1985 annual meeting of the Population Association of America, Boston, Massachusetts, submitted for publication.

Second, comparison of the 1980 census count of persons 75 years and over with Medicare data showed significant misreporting of age at certain ages. To correct for this misreporting of age, single years of age for persons 75 to 79 years old were computed using osculatory interpolation. The estimates generated for the population 75 years and older are likely to be less reliable than those for the younger ages because of the possibility that some misreporting of age still exists.

ROUNDING OF ESTIMATES

Each figure in this report has been rounded independently to the nearest thousand from figures computed to the last digit; hence, the sum of parts may differ from the totals shown. Derived measures are based on the unrounded figures. Median ages are based on data for 5-year age groups.

RELATED REPORTS

The following table lists other Current Population Reports containing estimates related to those shown in this report and specifies the years for which consistent data are provided.

Type of population estimate	Years covered	Series P-25 report number
United States by:		
Age, sex, and race	1970 to 1979	917
Age, sex, and race	1960 to 1969	519
Age, sex, and color	1900 to 1959	311
Total, monthly, by type of population	1980 to 1986	1001
Total and components of change by race	1970 to 1983	990
Total and components of change by race	1940 to 1969	802
Total and components of change by age, sex, and color	1950 to 1960	310
